

# SUPER AI ENGINEER SEASON 4

# Image Search Logos (Computer Vision Hackathon) 2-4 February 2024

### **Image Search in Logos**

#### **Given:**

- Unlabeled Image Logo Dataset.
- Query Logo Images.

#### Task:

 Given The queries, search all images in the unlabeled dataset that is similar to them.

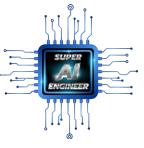

## **Image Search in Logos**

#### **Rules:**

- No API calls from third-parties.
- No manual labelling of classes in the datasets.
- All sources and inspirations involved should be sourced clearly.

#### Image Search in Logos

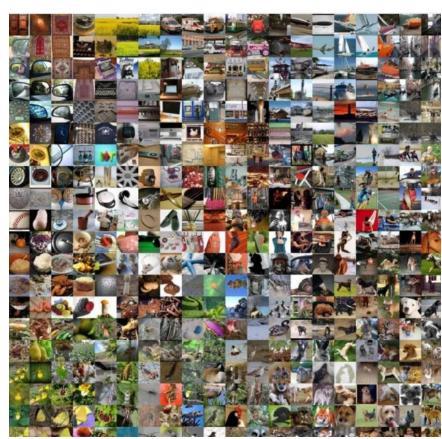

#### **Dataset:**

- Training Dataset 2400 file
- Testing Dataset 1120 file (Public 560 Private 560)
- Source Code 1 file
- Submit file output

## Output Format: .csv

≜ img_file =	# class =
64ccfecf-e451- 49a8-aa3f- acf2622a9a5c.jp g	12
c6df1385-382a- 4428-b41e- f2d729b90c87.jp g	22
af30e9d0-da6e- 42bd-814e- c70a0c16e554.jp g	22

#### Authentication

In order to use the <u>Kaggle's public API</u>, you must first authenticate using an API token. Go to the 'Account' tab of your <u>user profile</u> and select 'Create New Token'. This will trigger the download of kaggle.json, a file containing your API credentials.

If you are using the Kaggle CLI tool, the tool will look for this token at ~/.kaggle/kaggle.json on Linux, OSX, and other UNIX-based operating systems, and at C:\Users\<Windows-username>\.kaggle\kaggle.json on Windows. If the token is not there, an error will be raised. Hence, once you've downloaded the token, you should move it from your Downloads folder to this folder.

If you are using the Kaggle API directly, where you keep the token doesn't matter, so long as you are able to provide your credentials at runtime.
